Summary

I'm a back-end Node.js developer

Strong focus on backend architecture with Node.js, Databases and Nest.js framework, including designing scalable APIs.

Skilled in frontend development using React and TypeScript, and UI components libs.

Adept at leading projects, from architecture and database design to frontend implementation.

Working across multiple domains, including:

Healthcare, E-commerce, AI tool, Education, Social Media Analytics, SaaS.

Main Technologies

Back-end

- Node.js (Nest.js, Fastify), TypeScript
- **Databases:** PostgreSQL, MySQL, MongoDB, SQLite
- **ORMs:** TypeORM, Drizzle, Sequelize, Knex
- REST API, WebSocket
- NATS, RabbitMQ, Redis, Bull queue

Infrastructure

- AWS (EC2, S3, RDS, Lambda)
- Docker, GitHub Actions
- Terraform, Ansible

Front-end

- React.js, Vue.js, react-native

You can view some hobby and mobile applications on my [website](#).

Experience

Ein-des-ein

Back-end Node.js Developer | 03/2021 – Present

Key contributor responsible for backend architecture, database design, and external API integrations across multiple production systems.

Initiated and developed a reusable backend **project template** used by the team to speed up delivery of new products.

Several projects I have been working on:

Education platform

- Designed backend architecture and database schema from scratch.
- Implemented **Stripe** payments for courses, memberships, and event tickets.
- Built QR-based lesson attendance tracking.
- Developed study progress calculation logic with reward and discount rules.
- Implemented admin and teacher management panels.

Result: platform supports paid education flows, event monetization, and automated progress tracking.

AI assistant, a tool with its own knowledge base

- Implemented chat system with **Claude AI** integration.
- Integrated **Notion API** as a CMS for structured knowledge storage.
- Built prompt generation logic combining system prompts and knowledge base context.
- Designed REST API for managing content, users, and AI interactions.

Focus: AI-driven responses with controlled context and predictable output quality.

Hazard Reporting Platform (Microservices Architecture)

- **Microservices-based** backend (3 services)
- Google Maps API + PostGIS for geospatial data and real-time maps.
- Redis queues for async processing.
- Environmental hazard reporting with admin validation flow.
- Generation of PDF reports.

Online Medical Platform

- Integrated **PayPal** payments and pharmacy stock ordering.
- Integrated **Google Meet API** for secure video consultations.
- Built complex scheduling system (recurring slots, exceptions, day-offs).
- Implemented prescription workflow with multi-doctor approval.

Complexity: healthcare domain, strict permissions, and non-trivial scheduling logic.

Anti-Snore Mobile App

- Refactored **critical** core logic causing incorrect exercise generation.
- Replaced Redis-based solution with optimized SQL queries.
- Reduced infrastructure costs and simplified data consistency.

Result: improved stability and reduced operational costs.

Social network with streaming functionality for artists

- Built a **social network platform** with an admin panel for artists to schedule and host public or private paid online events for users.
- Designed complex **SQL queries** for calendar logic with recurring workday slots.
- Integrated **FFmpeg for video processing** (cropping, generating short clips).
- Implemented **real-time chats**.
- Used **AWS S3** service for store full stream video file.
- Developed a notification module (**email, push notifications**) triggered by various events.

ITTEAM

Back-end Node.js developer | 08/2020 – 01/2021

- System and database architecture development.
- Developed REST API Nest.js server, **chat microservice** using **NATS** transport.
- Built CI/CD pipelines, Docker for deploying.
- Used external services like Firebase and others for implement user authorization, push notifications & email notifications.

Result: API for the social-event mobile app, which shows events around you.

SPDeveloper, office

Full stack developer | 05/2019 – 02/2020

- Built REST APIs on Node.js.
- Implemented frontend features using Vue.js.

FlyFox, remote

Wordpress & Front-end developer | 08/2017 – 04/2019

- Developed and maintained WordPress-based websites.

Education

Software Development - 2022 – 2023

Master of Science in Software Development
Ivano-Frankivsk National Technical University of Oil and Gas

Software Development - 2019 – 2022

Bachelor of Science in Software Development
Ivano-Frankivsk National Technical University of Oil and Gas

Software Development - 2015 – 2019

Junior Specialist in Software Development
Ivano-Frankivsk National College of Electronic Devices by Technical University of Oil and Gas
